## Boolean Algebra

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## History

$\qquad$

- In 1854 George Boole introduced systematic treatment of logic and developed for this purpose an algebraic system now called Boolean Algebra.
- In 1938 C. E. Shannon introduced a two-valued Boolean Algebra called Switching Algebra, in
$\qquad$
$\qquad$
$\qquad$ which he demonstrated that this algebra can represented by electrical switching.

## Chapter Outline

$\qquad$

- Boolean Algebra ( Switching Algebra) $\qquad$
- Definitions
- Basic Axioms $\qquad$
- Basic Theorems
- Representation of Boolean Functions $\qquad$
- Combinational Circuit Analysis
- Combinational Circuit Synthesis $\qquad$
$\qquad$
$\qquad$

## Boolean Algebra Definitions

```
A boolean algebraic structure consists of
    > a set of elements (constants) }\textrm{B}={0,1
    > binary operations {+,\bullet}
    > and a unary operation { }
    > such that the following axioms hold:
    1. closure: a+b is in B a b is in B
    2. commutative: a+b=b+a a a b = b a
    3. associative: a ( (b+c) = (a+b) +c a c (b c c) = (a b b) \bulletc
    4. Identity: a+0 =a a \bullet 1 = a
    distributive: }\quada+(b\cdotc)=(a+b)\bullet(a+c)\quada\bullet(b+c
    6. complement: a + a'=1 a a a' = 0
```

## Definitions

- Boolean Algebra : An algebraic structure defined with a $\qquad$ set of elements $B=\{0,1\}$, a set of binary operators $(+, ., ‘)$, and a number of unproved axioms.
- Symbolic variables such as X, Y, Z represent the elements. A variable can take the value " 0 " or " 1 " which corresponds to the condition of a logic signal.
$\qquad$
$\qquad$
- Algebraic operators :
- Addition operator (+)
- Multiplication operator (.)
- Complement operator (')

## Basic Axioms

$\qquad$

- A variable can take only one of two values $\{0,1\}$ $\qquad$ (A1 ) $X=0$ if $X \neq 1 \quad\left(A 1^{\prime}\right) X=1$ if $X \neq 0$
- NOT operation ( The complement Operation ) (A2 ) If $X=0$ then $X^{\prime}=1 \quad$ (A2' ) If $X=1$ then $X^{\prime}=0$
- AND and OR operations ( Multiplication and Addition) :
(A3 ) $0.0=0$
( $\mathrm{A} 3^{\prime}$ ') $0+0=0$
(A4) $1.1=1$
(A4') $1+1=1$
(A5 ) $0.1=1.0=0$
(A5') $1+0=0+1=1$

## Generalized Demorgan's Theorem

- (T14)[F(X1,X2, ... , Xn,+, . )]’= F(X1', X2', ..., Xn', ., + )
- Example : $\mathrm{F}=(\mathrm{X} 1 . \mathrm{X} 2)+(\mathrm{X} 2+\mathrm{X} 3)$

## Duality

- Duality : Every Boolean expression remains valid if the (AND, OR) operators and $\{0,1\}$ elements are interchanged.
- Mathematical definition : F is a Boolean Function, FD the dual function is
FD(X1,X2, ... , Xn, + , .,') def as F( X1, X2, ...., Xn, . ,+ ,')
- $\mathrm{FD} \neq \mathrm{F}$

| Theorem |  |
| :---: | :---: |
| 7. idempotency: $x+x=x$ | $x \cdot x=x$ |
| 8. involution:$\left(X^{\prime}\right)^{\prime}=X$ |  |
| 9. uniting: $X \cdot Y+X \cdot Y^{\prime}=X$ | $(X+Y) \cdot(X+Y)=X$ |
| 10.absorption: $\begin{aligned} & X+X \cdot Y=X \\ & \left(X+Y^{\prime}\right) \cdot Y=X \cdot Y \end{aligned}$ | $\begin{aligned} & X \cdot(X+Y)=X \\ & \left(X \cdot Y^{\prime}\right)+Y=X+Y \end{aligned}$ |
| 11. factoring: $\begin{aligned} & (X+Y) \cdot\left(X^{\prime}+Z\right)= \\ & X \cdot Z+X^{\prime} \cdot Y \end{aligned}$ | $\begin{aligned} & X \cdot Y+X^{\prime} \cdot \dot{Z}^{Z}= \\ & (X+Z) \cdot\left(X^{\prime}+Y\right) \end{aligned}$ |
| 12. consensus: $\begin{aligned} & (X \cdot Y)+(Y \cdot Z)+\left(X^{\prime} \cdot Z\right)= \\ & X \cdot Y+X \cdot Z \end{aligned}$ | $\begin{aligned} & (X+Y) \cdot(Y+Z) \cdot\left(X^{\prime}+Z\right)= \\ & (X+Y) \cdot\left(X^{\prime}+Z\right) \end{aligned}$ |
| 13. de Morgan's: <br> $(X+Y+\ldots)^{\prime}=X^{\prime} \cdot Y^{\prime} \cdot$ <br> 14. generalized de Morgan's: <br> $f^{\prime}(X 1, X 2, \ldots, X n, 0,1,+, \bullet)=f(X 1$ | $\begin{aligned} & (X \cdot Y \cdot \ldots)^{\prime}=X^{\prime}+Y^{\prime}+\ldots \\ & \left\langle n^{\prime}, 1,0,0,+\right) \end{aligned}$ |

## Representation of Logic Functions

- Truth table with $2^{\wedge} \mathrm{n}$ rows, n : the number of variables
- Definitions :

Literal : a variable or its complement
Example : $\mathrm{X}, \mathrm{Y}$,
n - variable minterm : product term with n literals Example : X'.Y.Z

- n - variable maxterm : sum term with n literals

Example : $\mathrm{X}+\mathrm{Y}^{\prime}+\mathrm{Z}$

## Truth Table

- Example : F ( X, Y, Z )

| Row | X | Y | Z | F | Minterms | Maxterms |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | X'. Y'. ${ }^{\prime}$ | X + Y + Z |
| 1 | 0 | 0 | 1 | 1 | $X^{\prime}, Y^{\prime} . Z$ | $X+Y+Z$, |
| 2 | 0 | 1 | 0 | 0 | X'.Y.Z' | $\mathrm{X}+\mathrm{Y}^{\prime}+\mathrm{Z}$ |
| 3 | 0 | 1 | 1 | 1 | X'.Y.Z | $\mathrm{X}+\mathrm{Y}^{\prime}+\mathrm{Z}^{\prime}$ |
| 4 | 1 | 0 | 0 | 0 | X.Y'.Z' | $\mathrm{X}^{\prime}+\mathrm{Y}+\mathrm{Z}$ |
| 5 | 1 | 0 | 1 | 0 | X.Y'.Z | $\mathrm{X}^{\prime}+\mathrm{Y}+\mathrm{Z}{ }^{\prime}$ |
| 6 | 1 | 1 | 0 | 1 | X.Y.Z' | $\mathrm{X}^{\prime}+\mathrm{Y}^{\prime}+\mathrm{Z}$ |
| 7 | 1 | 1 | 1 | 0 | X.Y. Z | $\mathrm{X}^{\prime}+\mathrm{Y}^{\prime}+\mathrm{Z}^{\prime}$ |

## Canonical Representation :

- Canonical Sum ( Sum of Products- SOP ):

Sum of minterms corresponding to input combinations for which the function produces a 1 output.

- Example :
$F=X^{\prime} . Y^{\prime} . Z+X^{\prime} . Y . Z+X . Y . Z^{\prime}$
$F_{X, Y, Z}=\Sigma(1,3,6)$
- Canonical Product ( Product Of Sums-POS ):

Product of maxterms corresponding to input combinations for which the function produces a 0 output. $\qquad$

- Example :
$\mathrm{F}=(\mathrm{X}+\mathrm{Y}+\mathrm{Z}) \cdot\left(\mathrm{X}+\mathrm{Y}^{\prime}+\mathrm{Z}\right) \cdot\left(\mathrm{X}^{\prime}+\mathrm{Y}+\mathrm{Z}\right) \cdot\left(\mathrm{X}^{\prime}+\mathrm{Y}+\mathrm{Z}^{\prime}\right) \cdot\left(\mathrm{X}^{\prime}+\mathrm{Y}^{\prime}+\mathrm{Z}^{\prime}\right)$
$\mathrm{Fx}, \mathrm{Y}, \mathrm{Z}=$ П $(0,2,4,5,7)$
